

Prevent cash crunches. Recover missed revenue.

CashPilot reads Xero accounting data, forecasts 30-90 days ahead, and turns the result into an owner-approved action plan.

Small businesses need the next best action

Profit does not prevent a cash crisis when timing goes wrong.

- Invoice timing, supplier bills, payroll, and tax can collide even when sales look healthy.
- Revenue leaks hide in normal workflows: closed deals not invoiced, repeat customers going quiet, and paid orders not reconciled.
- Finance automation needs evidence and approval, because a wrong writeback can damage cash, trust, or accounts.

OWNER QUESTION

Will we have enough cash next month, and which move improves the forecast most?

CASHPILOT ANSWER

Approve five Xero-backed actions to avoid the breach and unlock revenue upside.

Xero stays at the centre of the workflow

CashPilot treats Xero as the source of truth, not a bolt-on.

Xero API footprint shown inside the app

- OAuth 2.0 connection flow and official Xero SDK patterns.
- Accounting API data drives forecasting, matching, recommendations, evidence, and draft writebacks.
- Demo mode mirrors Xero endpoint and payload shapes when live login is unavailable.

Forecast intelligence explains why cash changes

The model shows the drivers, not only the line.

- Daily forecast uses Xero due dates, expected payment dates, supplier bills, recurring flows, and bank data.
- Payment-delay scoring uses invoice and payment history by customer.

BUSINESS-FRIENDLY EXPLANATION

Monte Carlo tests many realistic payment futures, then names the payer, supplier bill, and revenue action that move cash most.

Forecast view: baseline, action scenario, and explanation

Every action can be audited before it touches Xero

The agent proposes. The owner approves.

- Shows Xero record IDs, such as invoice, contact, and payment references.
- Shows the endpoint used, for example GET /Invoices or GET /Contacts.
- Shows fields used, including due date, amount due, contact, line items, and payment reliability.

SAFE WRITE MODE

No invoice, quote, contact note, reconciliation task, or message is sent without approval.

Evidence drawer: Xero records, endpoints, fields, and payload preview

One Xero backbone supports cash, growth, and integrations

The same evidence layer supports all bounty tracks.

- Revenue growth: finds missed invoices, dormant customers, and subscription opportunities.
- Productivity: prepares reconciliation, duplicate bill review, and contractor bill allocation.
- Vibe Integrator: maps messy external records into Xero-ready invoices, bills, contacts, and items.

OUTPUT

Xero-ready drafts stay in review until the owner approves.

Messy external records mapped into Xero-ready objects

CashPilot makes Xero proactive

The result is an operating plan, not another static report.

- Analyses Xero accounting and payment data as the system of record.
- Ranks specific actions with quantified cash and revenue impact.
- Keeps Xero evidence visible before any draft writeback is queued.

CashPilot turns Xero history into approved next actions that prevent cash gaps and recover missed revenue.

The screenshot displays the CashPilot interface with a sidebar on the left and a main content area. The sidebar includes sections for 'SECTIONS' (Overview, Pending approval, Writeback queue, Smart mapping, Owner priorities, Productivity, Integrations, Cash forecast, Forecast intelligence, Xero footprint, Agent trace, Revenue opportunities, Action simulator, Draft messages, Audit log), 'SOURCE' (Demo snapshot, Live Xero API), and 'XERO CONNECTION' (Connected, Xero Demo Company (Local), Xero Demo Company (Local)). The main content area is titled 'AGENT TRACE' and shows a summary: 'Specialists explain, rank, and draft; deterministic code calculates the numbers'. Below this, there are five agent panels: 'Data Quality Agent' (INPUT: 11 invoices, 9 contacts, opening cash £12,600; REASONING: Checked whether due dates, contacts, opening cash, and payment history are complete enough to trust the forecast; OUTPUT: 100/100 data quality: forecast ready), 'Forecast Agent' (INPUT: 90-day ledger with 90 Monte Carlo band points; REASONING: Interpreted the risk window, safe-cash threshold, simulated uncertainty, and before/after action movement; OUTPUT: Cash falls below threshold on 2026-07-18; after-action minimum is £11,283), 'Cash Action Agent' (INPUT: 3 cash intervention candidates; REASONING: Ranked customer and supplier moves by cash protected before the risk window and relationship risk; OUTPUT: 3 pending cash action(s); 3 action(s) included in after-action forecast), 'Revenue Growth Agent' (INPUT: 7 pending revenue opportunities from invoices, contacts, line items, and external matches; REASONING: Looked for closed-won uninvoiced work, dormant high-value customers, repeat purchases, upsells, and unmatched external orders; OUTPUT: £25,450 expected revenue upside remains pending), and 'Communication Agent' (INPUT: 10 customer/supplier message drafts). Each panel has a 'fallback' button in the top right corner.

Agent trace: data checks, forecast reasoning, action ranking, and evidence review
